Learning Style: On Demand

Technology: ISC2

Difficulty: Advanced

Course Duration: 24 Weeks

Certified Cloud Security Professional Self-paced (CCSP)

About This Course:

Certified Cloud Security Professional (CCSP) training leverages the power of artificial intelligence, guiding students through a self-paced learning experience adapted to their unique needs. It covers the advanced technical skills and

knowledge for designing, managing and securing data, applications, and infrastructure in the cloud.

Course Objectives:

- Describe the cloud reference architecture.
- Indicate the design principles of secure cloud computing.
- Implement the cloud data security.
- Apply the cloud platform and infrastructure security.
- Practice the cloud application security.
- Construct the cloud security operations.
- Prepare to meet legal, risk, and compliance requirements.

Audience:

- Cloud Security Engineers
- Security Architects
- Cloud Architects

Prerequisites:

- Five years of cumulative, full-time working experience in IT (three of which must be in information security, and one of which must be in one of the six CCSP CBK domains)

Course Outline:

Domain 1.Cloud Concepts, Architecture and Design

- Cloud computing concepts and characteristics (on-demand self-service, elasticity, multi-tenancy)
- Cloud service models:

    - IaaS (Infrastructure as a Service)
    - PaaS (Platform as a Service)
    - SaaS (Software as a Service)
- Cloud deployment models:
    - Public cloud
    - Private cloud
    - Hybrid cloud
    - Multi-cloud
- Shared Responsibility Model
- Cloud reference architectures
- Secure cloud design principles
- Business requirements and risk management
- Cloud migration strategies

Domain 2. Cloud Data Security

- Data lifecycle management
- Data classification and ownership
- Encryption methods
- Key management systems
- Tokenization and masking
- Data Loss Prevention (DLP)
- Secure data deletion
- Privacy protection
- Data discovery and governance

Domain 3. Cloud Platform & Infrastructure

- Cloud infrastructure components
- Virtualization security
- Container and serverless security
- Network security in the cloud
- Identity and Access Management (IAM)
- Secure configuration of cloud resources
- Infrastructure hardening
- Microservices security
- Zero Trust architecture

Domain 4. Cloud Application Security

- Secure software development lifecycle (SSDLC)
- DevSecOps practices
- Application vulnerabilities
- API security
- Secure coding practices
- Application testing methods
- Identity federation
- Application authentication and authorization

Domain 5. Cloud Security Operations

- Cloud monitoring and logging
- Incident response in cloud
- Disaster recovery and business continuity

- Backup and restore strategies
- Security automation
- Patch management
- Vulnerability management
- Security orchestration

Domain 6. Legal, Risk and Compliance

- Data protection laws and regulations
- Privacy regulations (GDPR etc.)
- Risk management frameworks
- Compliance audits
- Contract and vendor management
- Service Level Agreements (SLAs)
- Cross-border data transfer regulations
- E-discovery and legal hold
