Agile Business Analysis

About Course:

This interactive, hands-on two-day course gives business analysts and Agile team members the skills to contribute meaningfully to iterative product development. You'll learn how to adopt an Agile mindset, collaborate effectively across teams,

and prioritize what matters most to stakeholders. The course explores how Agile techniques can streamline business processes and improve responsiveness to change. Through real-world exercises and collaborative scenarios, you'll practice writing user stories, mapping value, refining product backlogs, and supporting Agile planning. By the end of the course, you'll be equipped to drive better business outcomes through continuous delivery and informed decision-making.

Course Objectives:

In this training course, you'll explore how business analysts support Agile teams throughout the product lifecycle. You'll learn to apply Agile principles to elicit and manage requirements, write and refine user stories, and build a product backlog that aligns with customer value.

You'll also examine the role of the business analyst in Scrum events and planning sessions, as well as techniques like impact mapping, story mapping, and sprint retrospectives.

Audience:

- This course is intended for business analysts familiar with Agile or those performing business analysis tasks in an Agile environment. It is also suitable for anyone wanting to learn Agile analysis in depth or for those in an organization planning to expand their Agile BA practices.

Prerequisites:

- Basic Understanding of Business Analysis Concepts

- Familiarity with core business analysis principles such as requirements gathering, stakeholder communication, and process modeling is recommended.

- Foundational Knowledge of Agile Methodologies

- A basic understanding of Agile concepts (e.g., Scrum, Kanban, iterative development) will help learners get the most out of the course.

- Professional Experience (Recommended)

Course Outline:

- Understanding Agile and Business Analysis

- Scrum Framework & Team Roles

- Visioning and Planning in Agile

- Identifying Stakeholders and Defining User Roles

- Building and Refining the Product Backlog

- Project Inception and Sprint Zero

- BA Roles in Scrum Events

- Agile Tools and Techniques
