Technology: Microsoft

Difficulty: Intermediate

Course Duration: 4 Days

Microsoft Identity and Access Administrator (SC-300T00)

About this Course:

This course provides IT Identity and Access Professional, along with IT Security Professional, with the knowledge and skills needed to implement identity management solutions based on Microsoft Azure AD, and it connected identity

technologies. This course includes identity content for Azure AD, enterprise application registration, conditional access, identity governance, and other identity tools.

Course Objectives:

- Implement an identity management solution
- Implement an authentication and access management solutions
- Implement access management for apps
- Plan and implement an identity governancy strategy

Audience:

This course is for the Identity and Access Administrators who are planning
to take the associated certification exam, or who are performing identity and
access administration tasks in their day-to-day job. This course would also
be helpful to an administrator or engineer that wants to specialize in
providing identity solutions and access management systems for Azurebased solutions; playing an integral role in protecting an organization.

Prerequisites:

Successful learners will have prior knowledge and understanding of:

- Security best practices and industry security requirements such as defense in depth, least privileged access, shared responsibility, and zero trust model.
- Be familiar with identity concepts such as authentication, authorization, and active directory.
- Have some experience deploying Azure workloads. This course does not cover the basics of Azure administration, instead the course content builds on that knowledge by adding security specific information.
- Some experience with Windows and Linux operating systems and scripting languages is helpful but not required. Course labs may use PowerShell and the CLI.

•

Course Outline:

Module 1: Implement an identity management solution

Learn to create and manage your initial Azure Active Directory (Azure AD) implementation and configure the users, groups, and external identities you will use to run your solution.

Lessons

- Implement Initial configuration of Azure AD
- Create, configure, and manage identities

Implement and manage external identities

Implement and manage hybrid identity

Lab: Manage user roles

Lab: Setting tenant-wide properties

Lab: Assign licenses to users

Lab: Restore or remove deleted users

Lab: Add groups in Azure AD

Lab: Change group license assignments

Lab: Change user license assignments

Lab: Configure external collaboration

Lab: Add guest users to the directory

Lab: Explore dynamic groups

After completing this module, students will be able to:

- Deploy an initail Azure AD with custom settings
- · Manage both internal and external identities
- Implement a hybrid identity solution

Module 2: Implement an authentication and access management solution

Implement and administer your access management using Azure AD. Use MFA, conditional access, and identity protection to manager your identity solution.

Lessons

- Secure Azure AD user with MFA
- Manage user authentication
- Plan, implement, and administer conditional access
- Manage Azure AD identity protection

Lab: Enable Azure AD MFA

Lab: Configure and deploy self-service password reset (SSPR)

Lab: Work with security defaults

Lab: Implement conditional access policies, roles, and assignments

Lab: Configure authentication session controls

Lab: Manage Azure AD smart lockout values

Lab: Enable sign-in risk policy

Lab: Configure Azure AD MFA authentication registration policy

After completing this module, students will be able to:

- Configure and manage user authentication including MFA
- · Control access to resources using conditional access
- Use Azure AD Identity Protection to protect your organization

Module 3: Implement access management for Apps

Explore how applications can and should be added to your identity and access solution with application registration in Azure AD.

Lessons

- Plan and design the integration of enterprise for SSO
- Implement and monitor the integration of enterprise apps for SSO
- Implement app registration

Lab: Implement access management for apps

Lab: Create a custom role to management app registration

Lab: Register an application

Lab: Grant tenant-wide admin consent to an application

Lab: Add app roles to applications and recieve tokens

After completing this module, students will be able to:

- Register a new application to your Azure AD
- Plan and implement SSO for enterprise application
- Monitor and maintain enterprise applications

Module 4: Plan and implement an identity governancy strategy

Design and implement identity governance for your identity solution using entitlement, access reviews, privileged access, and monitoring your Azure Active Directory (Azure AD).

Lessons

- Plan and implement entitlement management
- Plan, implement, and manage access reviews
- Plan and implement privileged access

Monitor and maintain Azure AD

Lab: Creat and manage a resource catalog with Azure AD entitlement

Lab: Add terms of use acceptance report

Lab: Manage the lifecycle of external users with Azure AD identity governance

Lab: Create access reviews for groups and apps

Lab: Configure PIM for Azure AD roles

Lab: Assign Azure AD role in PIM

Lab: Assign Azure resource roles in PIM

Lab: Connect data from Azure AD to Azure Sentinel

After completing this module, students will be able to:

- Mange and maintain Azure AD from creation to solution
- Use access reviews to maintain your Azure AD
- Grant access to users with entitlement management

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
