Business Analysis Essentials (BAB-608)

About this course:

There are no second opinions about the importance of the functions, tasks, and activities performed by business analysts in the complex world of today. Business analysts are not only responsible for describing the needs and requirements of every project in a simple and easy-to-understand manner, but they are also tasked with the responsibility of ensuring that teams do not lose track of the purpose for which the project was initiated. Additionally, business analysts are also responsible for the collection, documentation and tracking of requirements in a variety of scopes.

Needless to say, the going can get tough at times as a business analyst.

That's exactly why this business analysis class has been designed to help equip interested student with the knowledge and skills to make their jobs easier. The course will also introduce students to best practices and tried and tested methods in the world of business analysis.

Aligned with the standards for requirements definition and business analysis, this course is compliant with the Business Analysis Body of Knowledge (BABOK) of the International Institute of Business Analysis (IIBA). This BABOK compliant business analysis class will not only help students receive IIBA business analyst certifications in the future, but since BABOK is all set to become the business analysis standard, the course will offer multifaceted benefits to students.

Since the final version of BABOK is still in the making, the Business Analysis Essentials course will be updated to adhere to the standard once all updates to the Business Analysis Body of Knowledge have been made.

Course objectives:

- In-depth understanding of what business analyst roles entail
- Introduction to standard business analysis methods
- Understanding how to go about management and elicitation of project requirements
- Understanding how concepts taught in the workshop can be applied practically

Audience:

- Business Analyst
- Business Managers
